Get a Wireless Service will bring you a Priceless Business

S1 Introduction

Wireless Service Bell (S1) provides restaurants an instant calling service (for customers who need services in the situation of restaurants or any servicing area) via wireless technology. It gives the power of arranging waiter and waitress to provide a real-time response for customer's needs in lesser efforts than the traditional serving method.

With S1, it guarantees your customer for a better and efficiency serving service experience ever. In spite of the wired design of a typical service bell, S1 uses the latest wireless technology for better installation - that is, no more new renovation of your restaurant! The device neither does it break your own restaurant's interior design nor adding hassles to the installation. S1 truly gives you the freedom of wirelessly services on demand.

Product Highlights

- High sensitivity wireless, signal range reaches up to 50 meters.
- Install up to 32 Wireless Service Bell Buttons.
- Provide 4 types of reminding tones selection
- High performance and stability of wireless connection with anti-interferon technology
- Elegancy appearance and elaborate finished

S1 Application

Club

Tea House

Coffee Shop

Place S1 in any type of servicing business/facility can enhance your business image as well as your service quality without ruin your facility's interior design and theme style.

S1 Wireless Service Bell Button can be placed and matched with Theme Restaurant, Romantic Restaurant, Ghatto Club, Lifestyle Cafe, or Spiritual Tea House, etc. S1 can truly provide you and your business with the best care of your customers and a quality servicing experience. S1 can be applied to the situations and places such as shown above.

Traditional Serving Method v.s. S1 Wireless Serving Method

No one's around when ordering. Wait a long time for server's coming. Server's disturbing. Wait a long time for water refilling. Slow checkout process. Bad moon occurs.

Traditional Serving Method

We call the server upon our needs. BUT: Don't we feel whenever we are in the situations such as ready to order, getting water to refill or even checking out, there's no one for us to reach? However, if server's around, he/she's mostly watching us without servicing anything while we are enjoying our dish. Don't these frustrate you sometimes and make you a bad day?

Press the Wireless Service Bell Button when ordering. As soon as the server knows your call, she'll come. Enjoying your dish without server's disturbing. "Press it" upon your needs.

S1 Wireless Serving Method

S1 Wireless Service Bell can resolve all the hassles we've experienced in any servicing situation. First, customers call for their needs by press the S1 Wireless Service Bell Button. As soon as the server gets the call from S1 system, server can now go to the corresponding table by the LED indicators which shows the caller table number.

One of the S1 advantages is to get rid of unnecessary visits of customers from the server. Server is no longer need to ask customer's needs by himself. Customers can enjoy their dish until their next request, then it's just another press of the button.

"Press it" again for checkout. Enjoy a happy day.
